

CHARRIOT PANTHER

SPECIFICATIONS

The Panther Mini Dolly (often referred to or configured as a Mini Base Dolly) is a compact and highly versatile camera support system manufactured by the reputable German brand Panther. It is designed for both studio and outdoor environments, offering an extremely stable and modular base for fluid camera movements.

Configuration & Operating Modes

The main advantage of this system is its removable central column. When the lifting column (usually a hand-crank or round column) is detached, the equipment transforms into a low-profile Leichtdolly (Lightweight Dolly / Mini Base Dolly). In this configuration, it can accept accessories such as:

Turnstile attachments / seat mounts.

Euro, Mitchell, or Bowl adapters for mounting fluid heads, jibs, or bazooka setups directly onto the base.
