

CINEKINETIC ROLLING WONDER SPECIFICATIONS

The Cinekinetic Rolling Wonder is a classic, modular cinema camera dolly system engineered by the renowned Australian brand Cinekinetic. It is highly regarded in the film industry for its versatility and its ability to transform from an ultra-compact kit into a full-sized, heavy-duty production dolly. Cinekinetic markets these systems under the names Pocket Dolly and Traka Dolly, both of which utilize the core "Rolling Wonder" engineering concept.

Specifications and System Mechanics

The main advantage of this system is its "DIY" philosophy. Filming crews only need to transport the essential mechanical components in a compact case and can source the heavy, long structural elements from local hardware stores.

Attribute	System Details (Pocket / Traka)
Structural Concept	A portable kit assembled using a standard sheet of plywood and a regular broom handle.
Track Material	Operates on standard PVC pipes, steel tubes, or even straight logs.
Extensibility	Infinite. Utilizing Cinekinetic's track joiners, the travel distance can easily span over a city block.
Weight Capacity	Supports up to approximately 136 kg (300 lbs) on the full-sized Traka setup.
Compatibility	Heavy-duty cinema cameras, full-sized tripods, jib arms, teleprompters, and production accessories.
Operating Modes	Parallel ground tracking, stairs tracking, or vertical wall mounting (simulating a crane/jib move).
